

CAPSTONE TEAM SAMPLING TECHNIQUE GUIDE

Bakit Stratified Purposive Sampling Ang Pinakamagandang Gamitin Natin?

Target Topic: Sampling Technique Selection (Chapter 3.4)

Selected Method: Stratified Purposive Sampling

Target App: CDM Integrated Library Management System

Audience: Team Members & Defense Panel

1. Bakit Mas Maganda Ang Stratified Purposive Sampling?

Ito ang simpleng dahilan kung bakit **Stratified Purposive Sampling** ang pinakamagandang gamitin natin kaysa sa plain Purposive Sampling o Random Sampling:

Sampling Method	Paano Ginagawa?	Bakit Maganda o May Butas?
Simple Random Sampling	Bunutan lang sa buong CDM campus (e.g. random 100 students).	■ MAY BUTAS: Pwedeng makasagot ang estudyanteng hindi naman nagpupunta sa library o naghihiram ng libro. Masisira ang survey data.
Plain Purposive Sampling	Kukuha lang ng active library users.	■ MAY QUESTION ANG PANEL: Pwedeng itanong ng panel: <i>'Paano niyo nasigurado na may representation ang ICS, ITE, at IBE?'</i>
■ STRATIFIED PURPOSIVE SAMPLING	1. Hahatiin muna sa 4 Strata (ICS, ITE, IBE, Staff). 2. Kukuha ng active borrowers sa bawat grupo.	■ PINAKAMAGANDA & MATIBAY: Patas ang representation ng bawat Institute habang siguradong active library users lang ang sumasagot!

2. Paano Mo Ipapaliwanag Ito Sa Ka-Group Mo? (Taglish Script)

"Guys, mas maganda kung **Stratified Purposive Sampling** ang ilagay natin sa Section 3.4 ng manuscript natin. Kasi sa Colegio de Montalban, may tatlong magkakaibang Institute (ICS, ITE, at IBE) plus Library Staff. Kapag Stratified Purposive Sampling ang ginamit natin:

1. Sinisiguro natin na may pantay na representation ang bawat Institute (ICS, ITE, IBE, Staff).
2. Sinisiguro natin na active borrowers at librarians lang ang sasagot sa survey kaya accurate ang ISO/IEC 25010 data natin.

Kapag tinanong tayo ng panel kung bakit hindi pure random, sasabihin lang natin na kailangan kasi natin ng respondents na may totooong domain knowledge sa pag-search at paghiram ng academic books sa library."

3. Exact Copy-Paste Text Para Sa Manuscript (Section 3.4)

I-copy paste lang ito sa Section 3.4 ng Word Document niyo:

3.4 Sampling Technique

This study utilizes a **Stratified Purposive Sampling Technique** in selecting respondents for the system evaluation. The target population is first divided into four (4) non-overlapping strata representing the key academic stakeholders at Colegio de Montalban: (1) Institute of Computer Studies (ICS) students, (2) Institute of Teacher Education (ITE) students, (3) Institute of Business and Entrepreneurship (IBE) students, and (4) Library Administrative Staff. Within each stratum, purposive sampling is applied to select active student library borrowers and library personnel who frequently manage or utilize library reference materials. This sampling method ensures balanced program representation across all institutes while gathering knowledgeable evaluation feedback based on the ISO/IEC 25010 Software Quality Model.

4. Ready-to-Use Defense Answer Para Sa Panel

Kapag tinanonq ng Panel: 'Why did you choose Stratified Purposive Sampling?'

Sagot sa Panel:

"We chose **Stratified Purposive Sampling** because Colegio de Montalban consists of distinct academic institutes—ICS, ITE, and IBE—alongside the Library Administrative Staff. By stratifying our population first, we guaranteed fair and balanced representation across all degree programs. Then, by applying purposive sampling within each stratum, we ensured that our survey respondents were actual active library users with firsthand experience in borrowing prescribed references, using the mobile PWA portal, and evaluating the system's ISO/IEC 25010 software quality metrics."
